Peer-review under responsibility of the scientific committee of the ICSID 2022 Organizers

Keywords: Preface; fatigue; fracture; structural integrity

1. Preface

The 6th International Conference on Structural Integrity and Durability, ICSID 2022, was organized by the Faculty of Mechanical Engineering and Naval Architecture, University of Zagreb, and the Croatian National Group of the European Structural Integrity Society (ESIS), in Dubrovnik in Croatia from September 20 to 23, 2022.

Due to the Covid-19 pandemic situation, ICSID 2022 was organized as the Hybrid Conference i.e, a combination of on-site and online participation to provide safety and convenience for participants. The Conference was held in the Centre for Advanced Academic Studies (CAAS) of the University of Zagreb, in the city of Dubrovnik. The magnificent old building of CAAS is situated in the center of Dubrovnik on the Croatian Adriatic Coast, in the vicinity of the most prominent historical places of the Old Town (<http://icsid2022.fsb.hr/>). Online presentations were held

using a commercial meeting platform. In total 62 on-site and online presentations were given, including five plenary lectures.

The objective of the ICSID 2022 Conference was to bring together scientists, researchers, and engineers from around the world to discuss how to analyze, predict and assess the fatigue and fracture of structural materials and components. The Conference provided a forum for discussion of contemporary and future trends in experimental, analytical, and numerical fracture mechanics, fatigue, failure analysis, structural integrity assessment, and other important issues in the field.

A wide range of topics was covered such as: Failure investigation and analysis; Multiscale materials modeling; Mixed-mode and multiaxial fatigue and fracture; Durability and life extension of structures and components; Structural integrity of 3D-printed structures; Models, criteria and methods in fracture mechanics; Finite element methods and their applications; Effect of residual stresses; Fatigue and fracture of weldments, welded components, joints and adhesives; Reliability and life extension of components; Corrosion, environmentally enhanced degradation and cracking, corrosion fatigue; Fracture and damage of cementitious materials; Fatigue and fracture of polymers, elastomers, composites and biomaterials; and others.

Prior to the ICSID 2022 Conference a two-day Summer School with the topic “Fatigue and fracture modelling and analysis” was organized for graduate students, researchers, and engineers from industry. Those participants who came to Dubrovnik, besides the excellent technical program, had the opportunity to enjoy their stay in Dubrovnik, one of the most famous Mediterranean cities, world celebrated symbol of historical heritage and beauty, which has found its place in the UNESCO World Heritage List.

As the Guest Editors of this Conference Proceedings, we wish to thank all authors for their contributions.

Guest Editors of the Procedia Structural Integrity ICSID 2022 Conference Proceedings:

Željko Božić, University of Zagreb, Croatia

Siegfried Schmauder, University of Stuttgart, Germany

Katarina Monkova, Technical University in Kosice, Slovakia

George Pantazopoulos, ELKEME - Hellenic Research Centre for Metals S.A., Athens, Greece

Sergio Baragetti, University of Bergamo, Italy

Francesco Iacoviello, Università di Cassino e del Lazio Meridionale – DICeM, Italy
